(54) BRAKE MOUNTING STRUCTURE

(57)Abstract:

PURPOSE: To improve accuracy during mounting and to reduce costs by integrally providing a braking mechanism.

CONSTITUTION: In a disk brake, a support is formed by extending a part of the outer race 2a of a hub unit 2 and a braking mechanism part is made integral without depending on a vehicle side. Thus, cumulative mounting errors are reduced and the relative position of a rotor 12 and its vibration against a braking unit 4 are reduced. Also, because of the integral formation of the braking mechanism part and its mounting on a vehicle from the outside of the rotor 12, an assembling process is simplified, an adjusting process is eliminated and thus costs are reduced.

LEGAL STATUS

[Date of request for examination]

11.06.2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
